Truly Global Satellite Tracking

Web-based viewer included with every hire

Google Earth can be used to view tracks in 3D

Add waypoints and markers to the map

The Yellowbrick Adventure Tracker is a well-proven, self-contained, fully-automatic satellite tracking device. It will accurately report its position from anywhere on Earth, including polar, ocean and desert regions. It is lightweight, waterproof and built to withstand extreme environments.

Yellowbrick improves media relations and generates public interest in remote events. Originally designed for adventure racing, it has applications in yacht racing, trekking, cycling, skiing, polar expeditions, mountaineering, gliding and many other activities that take place in areas where communications are challenging. Yellowbrick's alert feature complements existing safety procedures, allowing teams to rapidly notify organisers of a problem.

Yellowbrick is available to rent for individual or event use. Our pricing is fully inclusive of satellite fees and access to our online tracking systems.

Prices are shown overleaf. Please contact us to discuss your requirements.

"The Adventure Trackers used during the Adventure Racing World Championships 2007 proved to be an amazingly effective tool that we could use in many different ways. Firstly, the simple reassurance provided by knowing where teams were at any time was immeasurable..."

Phil Humphreys, Race Director, ARWC 2007

"Checking on their positions regularly in poor weather enabled us to have an incredibly accurate picture of how the groups were progressing and enabled us to deploy staff efficiently to check on their welfare"

"I can see this technology becoming an integral part of the toolkit used by experienced staff to supervise groups out on expeditions"

Nathan Davis, Duke of Edinburgh Gold Expedition Coordinator
